The Bomb - 26dB of Clean Boost

1: INPUT JACK Connect a cord from your instrument here. Removing the cord from the INPUT jack when not in use disconnects the battery which will prolong battery life.

2: OUTPUT JACK Connect a cord out to your amplifier here.

3: 9 VOLT INPUT Connect an optional power supply here. Accepts an industry standard 9 Volt regulated DC supply with a 2.1mm barrel type connector, center contact negative. The Whirlwind PS9V-EFX power supply is recommended for proper operation.

4: This controls the amount of boost applied to the signal. At full counter-clockwise ("1"), there is no boost, the unit is at unity gain. As the knob is turned up, the gain gradually increases until it reaches +26 dB of gain at full up ("11").

5: STATUS LED Illuminates when the effect is active.

6: FOOTSWITCH Turns the effect on and off. When OFF, the unit is completely removed from the signal path (TRUE BYPASS).

7: BATTERY COMPARTMENT Remove 4 screws on the bottom of the unit to access the battery. Be sure to leave the protective insulator in place to prevent the circuit board from contacting the metal case.
